

k:c web design have been working in the web industry for over 10 years and many years in the print industry before that. We're only small, but perfectly formed, with a strong reputation for creating simple, stylish and accessible websites.

Being a small company means we have to work smart and hard and this simple philosophy means we'll deliver your project on time and on budget. We aim to create unique ideas, evolve them into realistic solutions that will generate effective results for your business. You can see more of what we do in the projects section.

We develop most of our web sites using XHTML, CSS and relevant technologies such as ASP, PHP, MSSQL and MySQL.

Services & expertise

We've done everything from small independent websites to full e-commerce portals. With the core skills and experience we have on offer there isn't much we can't do on the web - and off it!

Stylish, usable websites

We love designing websites from the ground up and we'll work together with you to create a website that fulfills all your needs. We'll set up a demo site so you can see the project progressing and if the project is big enough we'll give you your very own project management interface so you can keep track of exactly what's happening.

CSS, XHTML, accessibility & web standards

We'll use all the latest technologies and web standards which means you get a site that won't be out-dated in 6 months time and will be a great foundation for further development in the future. We believe websites should be accessible to users of all abilities. We also understand that there are limitations and some projects will suite more accessibility options than others. We'll advise, were we can, on all aspects of usability and accessibility.

Bespoke design solutions

We design and create everything from scratch for each individual client. We understand that every single one of our clients has different needs so we'll work with you in finding out those needs and design your site accordingly.

Web branding

We have many years experience in web and print design, we do still enjoy doing the odd spot of print work, so if you're a web start-up and you need an online or offline brand/identity designing then we can do that to.

Flash and other media design

We also create websites using Flash and other media. We can create Flash animations, illustrations, Flash video, simple movie editing and even create original music scores.

Content management tools

Content management makes website administration easy. We can create bespoke content management tools for any special needs - such as online shops - or use one of our preferred partner systems such as Expression Engine - great for content management and blogging - or Trading Eye - great for shops.

Website re-designs

Site looking a bit dated? Want to re-vamp your site with a fresh look? Need to re-structure content and add accessibility? There are many reasons for re-designing a web site, some of our oldest clients have re-vamped their sites 3-4 times for any number of reasons. If you think you want a re-design then let us know. We can even evaluate your existing site and let you know what we think you should do.

Eco-friendly (and other) web hosting

If you need a hosting package to suit a new development or upgrade to your site or if your current hosting just isn't up to scratch then we can help you out. We can even supply you with web hosting that is eco-friendly and powered by the sun!
